

Larger bets do not show reliably better outcomes

Among 1,988 unusual bets priced from 1% to below 10%, win rates remain low across the full size distribution.

A · Bet-size distribution

B · Win rate by bet-size quintile

Notes: \$1,000+ bets only. Confidence intervals are Wilson 95% intervals. Primary clustered regression p = 0.730; statistical association does not establish private information.
